

OE GRADE BRAKE & FRICTION SOLUTIONS

AFTERMARKET CATALOG

At **Carlisle**, we are proud to maintain our position as a top-tier supplier for providing highly engineered motion control solutions for severe duty and high energy applications. OE-grade product development processes and global capabilities ensure Carlisle has the capacity to provide high-quality, cost-competitive solutions.

When choosing a Carlisle product, our customers expect a quality solution that will keep their application operating at an OE level of performance under the toughest environmental conditions. Carlisle remains determined to produce the highest quality

brake system products available for today's on- and off-highway fleet owners and equipment operators.

Carlisle product and design engineering teams are available to work with your technical support teams to optimize an appropriate solution in order to meet the specifications of your application.

From an aftermarket service kit to a complete brake system solution, Carlisle's engineering support and aftermarket sales representatives are prepared to help customers obtain industry-proven solutions the first time, every time.

## 6 REASONS TO CHOOSE CARLISLE AFTERMARKET PRODUCTS

**1**

Original Equipment Heritage

**2**

Design Engineering

**3**

Quality Assurance

**4**

Limited Lifetime Warranty

**5**

Global Customer Support

**6**

Experienced Customer Service

### CARLISLE OFFERS OE GRADE BRAKE AND FRICTION SOLUTIONS

- OE and Aftermarket products are manufactured in the same ISO-certified facilities

- OE and Aftermarket products are manufactured on the same production lines

- Production of OE and Aftermarket products are managed by the same quality control/SPC system

- Carlisle Aftermarket products offer specific features not available from most aftermarket suppliers

**106-107** | Combination Brakes + Kits

### CARLISLE HYDRAULIC CONTROL PRODUCTS

**108-119** | Standard & Boosted Master Cylinders

**120-125** | Hydraulic Valves and Adjusters

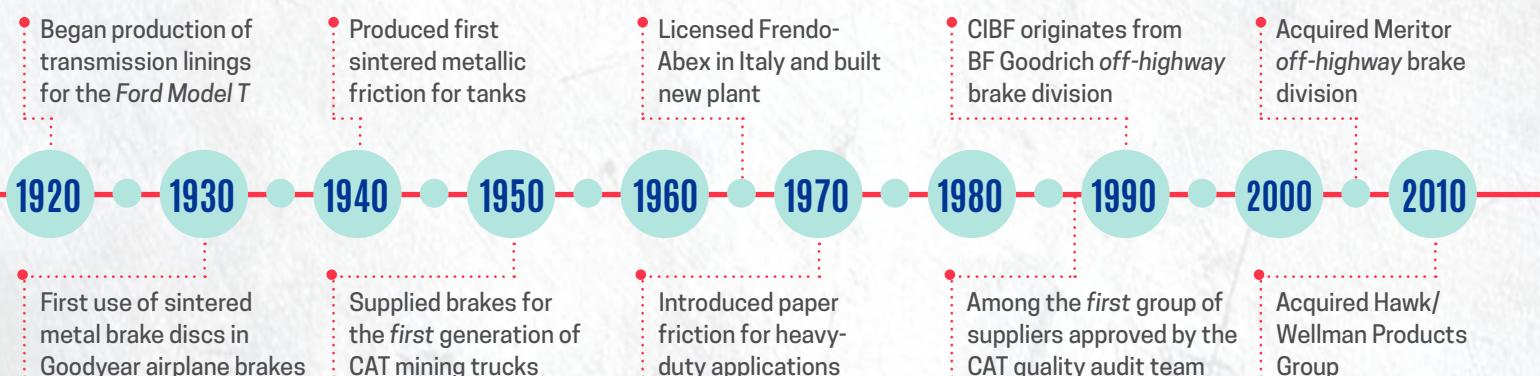

Carlisle Brake & Friction is a global leader in the development and supply of severe-duty and high performance brake, friction and hydraulic actuation product technologies, servicing both the Original Equipment and Aftermarket customer base in a variety of end markets.

Carlisle is committed to providing customers with premium quality brake system product solutions for both on- and off-highway applications. At Carlisle, the rigid quality, application testing and validation standards of our products result in motion control system components that demonstrate infallible field performance and provide superior customer value. Carlisle products are performance proven, offering the best possible value for aftermarket distributors, fleet owners and off-highway operations. For decades, Carlisle products remain a preferred brake system solution by professional repair shops and fleets striving to maintain the superior OE quality of their on-highway vehicles and off-highway mobile equipment.

Carlisle's long-standing history of design successes and demonstrated performance can be attributed to years of experience in research and development, testing proficiency and manufacturing excellence on a global scale.

More than 1,700 employees worldwide support our diverse motion control market segments with innovative solutions as well as a commitment and expertise that only a company with decades of industrial braking experience can provide.

Every day we are building stronger, closer relationships with customers, using our insight and experience in order to specifically tailor solutions to meet their individual needs. From identifying the appropriate brake, friction, hydraulic or aftermarket kit solution for your application to troubleshooting maintenance inquiries, Carlisle provides the customer service and support necessary to keep your equipment up and running smoothly.

## BRAKE ASSEMBLIES

### CALIPER BRAKE DEVELOPMENT - DESIGN AND TESTING:

- Extensive lab and field testing ensure performance characteristics meet all theoretical models
- Custom designed testing equipment simulates real world conditions and confirms engineering premises
- Structural endurance testing machines and inertia dynamometers test overall strength and performance

### CALIPER BRAKE VALIDATION AND PERFORMANCE TESTING:

- Dynamic friction (torque) tests are designed to simulate performance conditions under various application loading
- Chemical and thermal analysis equipment measures temperature saturation versus duty cycle
- Heat fade tests evaluate performance characteristics following an extreme heat episode
- Torque fatigue procedures test performance and durability under the most severe conditions

## FRICTION PRODUCTS

### FURNACE FLATTENING:

- Provides stress relief for additional hardness control following heat treat and grinding
- Ensures part flatness, parallelism and hardness for proper fitment and performance
- Performed on all Carlisle friction discs and opposing plates

### GAS NITRIDING:

- Process designed to increase strength and hardness without affecting the rest of the part
- Provides part durability, reducing downtime due to fatigue, distortion or breakage
- Performed on all Carlisle friction discs and opposing plates

## HYDRAULIC ACTUATION

### BOOSTER AND MASTER CYLINDER TESTING PROCEDURES:

- Environmental chambers test performance under various possible conditions of a given application
- Hydraulic testing capabilities measure durability and validate lasting performance
- Failure analysis assessments ensure quality

### HYDRAULIC VALVE TESTING AND DESIGN:

- Each and every Carlisle valve is both performance and leak tested to ensure the highest level of quality
- Tested and proven capable of up to 3500 PSI input pressures
- Flow rate measures and pressure tolerance testing demonstrate superior flow capacity

## MINING

**MINING PRODUCT SOLUTIONS:** Wet Brake Friction Discs, Disc Brake Pads, Dry Caliper Service Brakes, Park and Emergency Brakes, Hydraulic Actuation, Manifolds, Charge Valves, Clutch Discs, Transmission Discs

**CARLISLE SERVED MINING APPLICATIONS:** Front-end Loaders, Backhoe Loaders, Wheel Loaders, Haulage Trucks, Tractors, ADT's, Rough Terrain Cranes, Underground Mining, Winches and Tow Behind Scrapers

## AGRICULTURE

**AGRICULTURAL PRODUCT SOLUTIONS:** Wet Brake Friction Discs, Hydraulic Actuation, Disc Brake Pads, Service Brakes, Park Brakes, Ball on Ramp Brakes, Drum Brakes, Clutch Discs, Transmission Discs

**CARLISLE SERVED AGRICULTURAL APPLICATIONS:** Tractors, Combine Harvesters, Roller Mills, Scrapers, Utility Vehicles, Material Handling

## CONSTRUCTION

**CONSTRUCTION PRODUCT SOLUTIONS:** Clutch Friction, Wet Friction, Hydraulic Actuation, Service Brakes, Park and Emergency Brakes, Disc Brake Pads

**CARLISLE SERVED CONSTRUCTION APPLICATIONS:** Backhoe Loaders, Front-end Loaders, Wheel Loaders, Pavers, Graders, Excavators, Rollers, Scrapers, Bulldozers, Mobile Cranes, Haulage Trucks, Telehanders, ADT's, Lift Trucks

## AEROSPACE

**AEROSPACE PRODUCT SOLUTIONS:** Steel Brake Rings, Steel Brake Cups, Steel Brake Insulators

**CARLISLE SERVED AEROSPACE APPLICATIONS:** Commercial and Military jets, Small Multipurpose Airliners and Helicopters.

## INDUSTRIAL

**INDUSTRIAL PRODUCT SOLUTIONS:** Wet Brake Friction, Drum Brakes, Dry Caliper Service Brakes, Disc Brake Pads, Hydraulic Actuation, Clutch Friction

**CARLISLE SERVED INDUSTRIAL APPLICATIONS:** Cranes, Material Handling Vehicles, Oil Rigs, Airport Tugs, Telehanders, Logging and Forestry Equipment

## ON-HIGHWAY

**ON-HIGHWAY PRODUCT SOLUTIONS:** Disc Brake Pads, Clutch Buttons, Brake Blocks, Brake Shoes and Lined Shoe Assemblies

**CARLISLE SERVED ON-HIGHWAY APPLICATIONS:** Class 3 – 8 Commercial Trucks

## MILITARY

**MILITARY PRODUCT SOLUTIONS:** Park Brakes, Service Brakes, Combination Brakes, Hydraulic Actuation, Clutch Discs, Transmission Discs, Wet and Dry Friction

**CARLISLE SERVED MILITARY APPLICATIONS:** Light to Heavy-duty Armored Vehicles, Tanks, Military Transports, and Aircraft Barriers (cable brake), Land Attack and Assault Vehicles

## MOTORSPORTS

**MOTORSPORTS PRODUCT SOLUTIONS:** Disc Brake Pads, Clutch Transmission Friction, Disc Brake Rotors

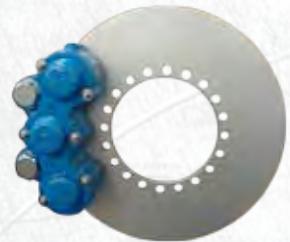

**CARLISLE SERVED MOTORSPORT APPLICATIONS:** Circle Track, Dirt Track, Road Course, Drag Racing, Endurance, Rally and Stock Car Racing

# BRAKE ASSEMBLIES

# WET FRICTION

Originating from the acquisitions of such OEM off-highway brake assembly pioneers as B.F. Goodrich, Meritor and Rockwell Automation, today Carlisle has evolved to become the industry authority in brake system innovation. Adhering to tradition, Carlisle continues to invest in the design, testing and improvement efforts of both new as well as industry prominent Carlisle legacy brake assembly models. Designed to endure some of the world's harshest demands including off-highway earthmoving equipment, Carlisle brake assemblies are built to keep equipment in service under even the most extreme conditions.

In conditions of varying load, Carlisle **Park and Emergency Brake** assemblies are designed to retain predictable and repeatable performance characteristics.

## OE GRADE FEATURES

- CNC machining capabilities ensure proper casting
- Rigid design and quality tolerances validate performance characteristics
- Cleanliness is made possible through enforcement of the Carlisle Operating System (COS), a continuous improvement process

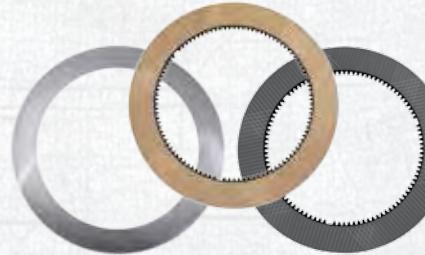

Carlisle park brakes are world-renowned for delivering the ultimate heavy-duty solution for safety, reliability, durability and lasting performance. Our spring apply, hydraulic release caliper park brakes are specifically designed for high torque static applications with a wide range of dynamic capabilities.

Carlisle's **Combination Brake** assemblies offer an integrated park and service braking solution. One set of opposed pistons are the SAHR park brake while the other two sets of opposed pistons are the hydraulically actuated service brake. Combination brake assemblies reduce the overall weight and space limitations necessary in maintaining two separate braking systems.

Large vehicles require increased braking capacity. Many of the world's largest off-highway vehicle and equipment applications depend on the trusted precision of Carlisle brake assembly performance. Decades of experience prove that Carlisle **Service Brakes** continuously meet the demands of a wide range of high energy, high torque severe-duty applications. Choose from any one of our hydraulically actuated, four to six piston caliper service brake assemblies, each built to withstand and perform under any of today's high energy, high torque dynamic braking conditions.

Carlisle wet friction product technologies set the industry standard for durability, fitment, safety and quality. Each Carlisle friction material available to the industrial aftermarket is specifically designed to maximize equipment uptime, reduce annual maintenance costs and meet the harsh demands of today's off-highway vehicles.

## MATERIAL TECHNOLOGY

Carlisle Paper friction discs demonstrate considerable performance advantages over the competition. With a proven tolerance to high heat and pressure loading conditions, our paper materials resist wear in order to deliver long-lasting, consistent performance.

**HDT Graphitic** discs are a unique and proprietary friction technology available exclusively through Carlisle's aftermarket distribution and custom rebuild channel partners.

## OE GRADE FEATURES

- Choose between OE level or higher friction profiles
- Best in class fade resistance

The HDT graphic disc is specifically designed for power shift transmission, forward and reverse clutch and wet brake applications.

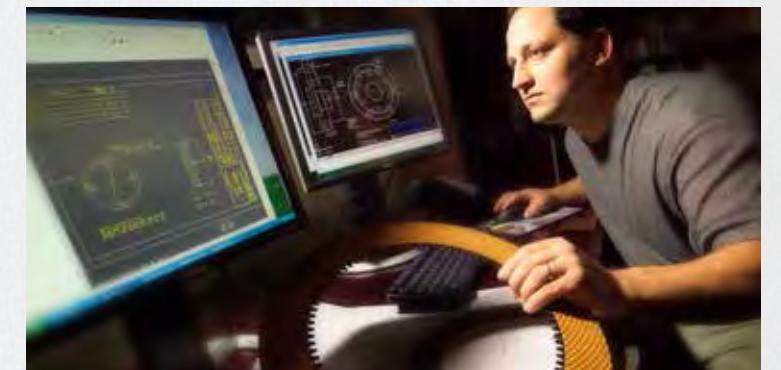

The quality of **Steel** disc opposing plates is critical to the durability and performance of friction discs and motion control systems. Surface finish, geometry and fitment are all critical to achieving expected performance from mating friction discs.

All Carlisle steel opposing plates endure additional secondary operations and quality inspections to ensure proper flatness, parallelism and surface conditioning for structural strength and fitment.

Carlisle offers **Sinter Metallic** discs in a variety of formulations. Our Iron (Feramic), Bronze, Copper and Ceramic products provide exceptional performance and durability for power shift transmission, power take-off, steering clutch, wet brake and other motion control applications.

**Semi-Ceramic** Premium disc brake friction material offering OE level performance, superior durability, friction coefficient, fade resistance and overall friction life.

Carlisle's **Semi-Metallic**, economy grade friction material demonstrates increased performance and wear characteristics compared to competitive aftermarket offerings on the market today.

# ON-HIGHWAY FRiction HYDRAULIC ACTUATION

Under the VelveTouch® by Carlisle Brake and Friction aftermarket brand name, Carlisle develops friction technologies including disc brake pads and clutch friction materials for light- to heavy-duty, on-highway vehicle applications. As a world renowned OE brake block, clutch and transmission friction manufacturer, Carlisle is proud to maintain a proven track record in developing friction materials that consistently achieve flawless performance characteristics under even the most complex, severe-duty applications.

VelveTouch **Clutch Buttons** provide rebuilders and clutch manufacturers with a substantial performance advantage to ensure repeat business through exceptional performance advantages in terms of friction coefficient, durability, design and quality.

## OE GRADE FEATURES

### CLUTCH BUTTONS:

- Designed for class 5 - 8 heavy-duty applications
- High friction materials
- Increased life and reduced annual maintenance costs
- Extended life of pressure plate and fly wheel with ultra-gentle friction formulations

### DISC BRAKE PADS:

- Mechanical bond friction material retention system
- Lower cost per mile through lasting performance
- Extend vehicle up-time
- Noise minimize (NVH)

Carlisle remains dedicated to the testing and development efforts of new and existing hydraulic actuation products including boosters, master cylinders, slave cylinders, hydraulic valves and actuators.

Carlisle offers hydraulic control valves, specifically designed to provide the precise pressure modulation required in heavy-duty applications. For additional versatility, Carlisle offers hydraulic control valve options for use in open center, closed center and load sensing hydraulic systems. Carlisle valves also provide high flow capabilities, allowing the brakes to fully apply in less vehicle traveling distance, therefore eliminating the need for additional braking capability.

## OE GRADE FEATURES

### BOOSTED MASTER CYLINDERS:

- Designs offer reduced pedal effort and pedal travel to achieve operating pressure requirements
- Enhanced operator comfort due to progressive and controllable braking response characteristics
- Proven to be the off-highway industry's most efficient method of applying the brakes

Carlisle manufactures hydraulic and mechanically actuated braking systems including Standard and Boosted Master Cylinders. Carlisle's standard actuation system offers a premium, fail-safe and cost effective solution for a variety of off-highway applications. For increased operator comfort and overall performance, Carlisle boosted master cylinder options deliver added vehicle control, stability and decreased stopping distance to stimulate balanced braking performance across axles.

### VALVES:

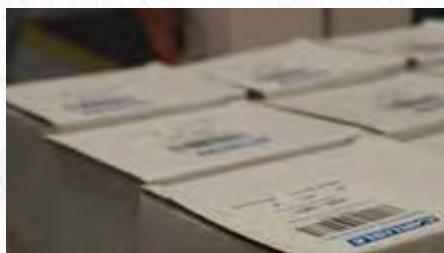

- Quiet, consistent, controlled operation
- Heavy-duty construction and proven quality
- High flow capabilities for increased pressure
- Externally adjustable valve option with settings for precise pressure requirements

# AFTERMARKET KITS

Maintain the original equipment performance characteristics of your Carlisle brake system by replacing all wear parts with top-quality, Carlisle original, aftermarket components to ensure the maximum mileage and dependable operation of your equipment. Servicing your brake system assembly with genuine spare parts is your best guarantee for maintaining the original performance.

Each and every spare part required to maintain your Carlisle assembly from the seals and O-rings to the pistons and the linings, are designed to work together in perfect harmony. Every part is factory-fitted, conforming to the Carlisle standard of quality.

## SEAL KITS

Carlisle offers an extensive range of **Seal Kit** solutions for the aftermarket. Just as our brake and hydraulic assemblies are designed and manufactured, our industrial seal kits are developed using only the most advanced materials and technology to ensure the prolonged life and performance characteristics required in demanding off-highway applications.

### CARLISLE SEAL KIT BENEFITS:

- Premium seals for protection against leaks
- Designed to protect assemblies from damaging environmental contamination
- Wide variety of seal materials allow Carlisle to maintain compatibility in all actuation fluids
- Specifically designed to meet the requirements of your application
- Carlisle original seal kit components meet our dimensional tolerances
- Meets the Carlisle standard for high heat temperature resistance

## OVERHAUL KITS

Extreme operating conditions, rough terrain and short stopping distances all impact the length of time necessary between scheduled maintenance.

Brake assemblies exposed to severe operating environments and recurring stops may require more frequent preventive maintenance including brake and hydraulic system overhaul to ensure lasting performance.

### CARLISLE OVERHAUL KIT BENEFITS:

- Complete repair solution, including seals, O-rings and linings where applicable
- Premium oil seals for the best possible protection against pesky leaks and damaging contamination
- All Carlisle original assembly parts ensure you maintain the same performance characteristics of the OE parts they replace

Carlisle aftermarket lining kits feature friction linings designed and built to the OE specifications, delivering optimal performance in your heavy-duty equipment. By choosing to service your equipment with only a genuine Carlisle lining kit, you are providing the best possible technological and economical solution based on your equipment's total operating costs.

At Carlisle, we subject every spare part to a rigorous process beginning with the concept design, and ending with an engineering release. All Carlisle aftermarket kit components were developed and tested specifically for your original Carlisle brake or hydraulic assembly.

To ensure that our customers experience the same level of quality in our spare parts as experienced in our brake and hydraulic assemblies, each Carlisle spare part must first undergo testing and validation. Only when our skilled team of engineers have approved a part for form, fit and function will that part be added to a Carlisle aftermarket kit. By establishing thorough testing and validation standards, we are able to assure customers that the same high quality performance characteristics experienced in the original equipment will continue.

## LINING KITS

Unlike the many aftermarket replacement parts suppliers that makeup today's deeply saturated market, **Carlisle Lining Kits** are manufactured to the standards of your original brake assembly.

### CARLISLE LINING KIT BENEFITS:

- Thru molded to provide max shear strength
- Back plate surface hardness prevents piston embedding
- Soft carrier from non-original Carlisle linings can lead to damage in other brake components and to brake failure
- Non-genuine linings exhibit poor insulation characteristics allowing disc heat to dissipate into the caliper
- Self-proclaimed "long lasting" non-original Carlisle linings can lead to early disc wear

When you choose a Carlisle original aftermarket **Overhaul Kit**, you are restoring your assembly to its primary level of performance.

Carlisle replacement parts are specifically developed to compliment the performance characteristics of your assembly. Each component included in our overhaul kits are designed and tested for compatibility and include all of the components you need for a thorough, lasting repair.

**GLOBAL ENGINEERING AND APPLICATION SUPPORT:**

- 5 engineering laboratories located worldwide: Solon (US), Bloomington (US), Pontypool (UK), Orzinuovi (IT), and Suzhou (PRC)
- 26 inertia dynamometers
- 80+ engineers
- 9 patents
- 22 Pro-E seats
- 4 seats mechanical FEA software

As a leading manufacturer of brake assembly, friction material, hydraulic actuation and related components, we never stop looking for better solutions. Carlisle is dedicated to continuously advancing our brake system product technologies in each of the markets we serve, all across the world.

Intensive research and development as well as close work with OEMs result in high levels of operational reliability for all Carlisle OE and aftermarket products. A combination of more than 80 years of experience in designing innovative brake and friction solutions and a strong customer focus make Carlisle an excellent partner that our distributors can depend on.

At Carlisle, we are thoroughly familiar with customer-specific requirements as a result of our close cooperation based on the individual customer need. Our state-of-the-art technology permits us to supply the appropriate brake, friction and hydraulic products as well as offer related product testing and data validation, focusing on high dependability in even the toughest environmental conditions.

At Carlisle, we regulate each aspect of the total braking system from the pedal to the brake gaining control over braking performance. Our assurance of a quality system is possible because we design, develop and manufacture our own friction materials, brake assemblies and hydraulic actuation products.

At Carlisle, we go the extra mile to deliver our customers unrivaled service and support. To ensure that our customers benefit from our dependable expertise and friendly service, we routinely refine the knowledge and proficiency of our customer support team through our internal product training programs. With Carlisle, you can expect world-class quality not only from our products, but also from our talented teams.

Like many of our customers, Carlisle operates globally. Our experienced staff of motion control experts are ready to assist you from any of our regional customer support locations across the world. We work diligently to provide the most efficient, high-quality product

solutions based on the unique requirements of the customer in order to improve the overall experience.

Carlisle is proud to maintain a veteran customer service and support team collectively representing over 100 years of comprehensive experience to accommodate and answer your questions.

The Carlisle Industrial Aftermarket team is in charge of replacement parts and service business with end-customers and distribution partners in all major industrial markets. Our top priority is to remain a reliable partner in supplying our customers with high-quality products and service.

**CREATE A WINNING SPIRIT**

Growth and continuous innovation do not only require investment into technology, but also into talent and people. At Carlisle, our people do what it takes to get the job done. Innovation is an everyday event on our factory floors.

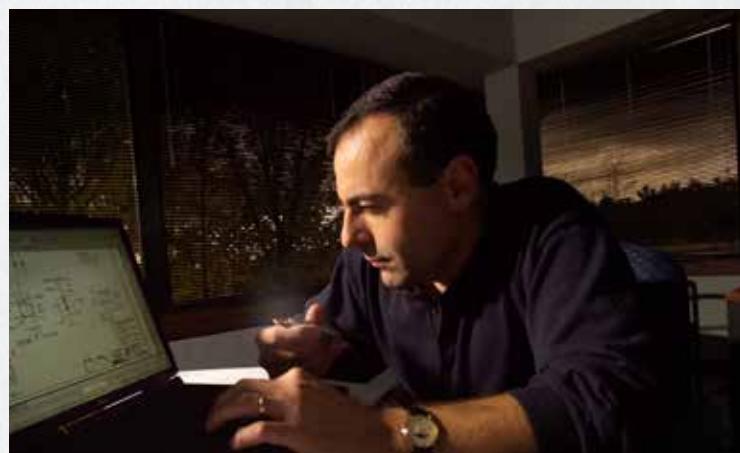

**CUSTOMER BENEFITS:**

- Global reach
- Over 60 years of combined representative experience
- Specific support focused exclusively on aftermarket

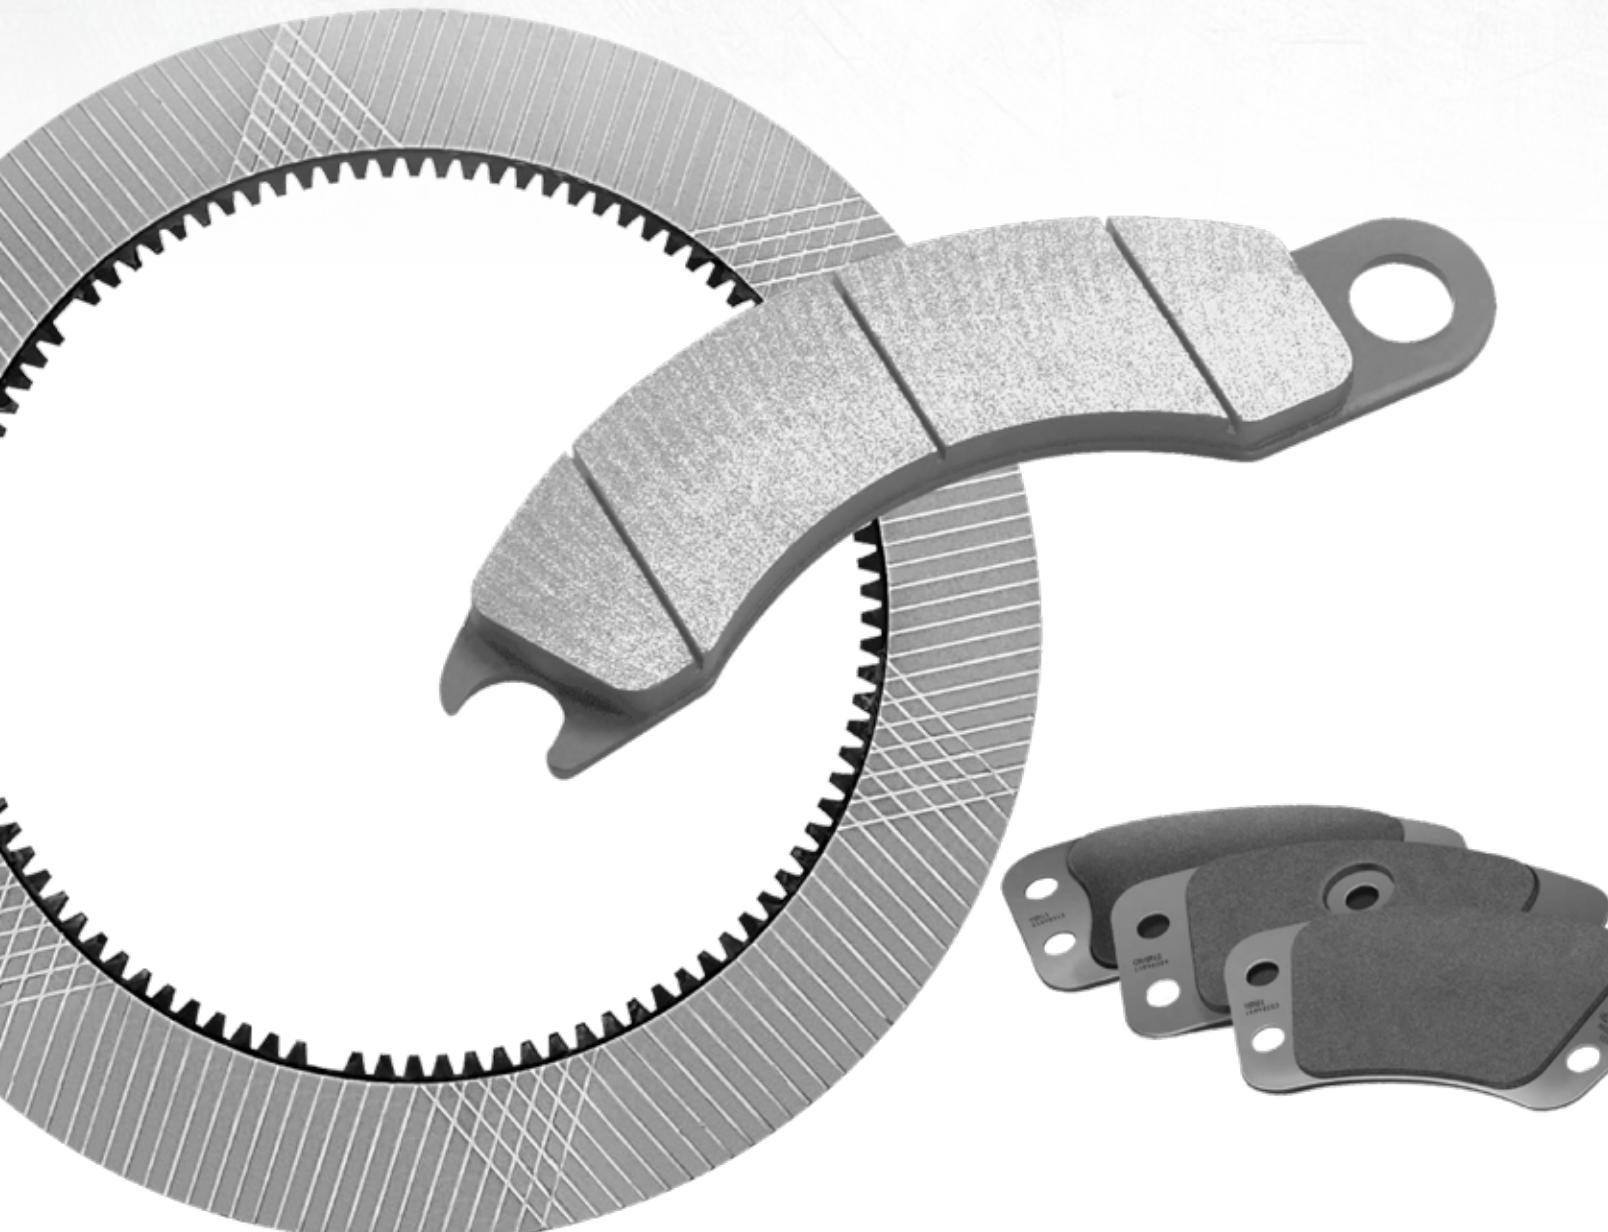

Each factory's innovative ideas and processes are enthusiastically shared across continents. As a result, the manufacturing environment in each of our plants is charged with the positive energy of continuous improvement. Our people make it work.

**SALES AND TECHNICAL SUPPORT:**

- Aftermarket Program Marketing team oversees development and production efforts of specific customer requests
- Field support and product training services available upon request
- Technical and engineering support available upon request

### TECHNOLOGY TIPS

#### BRAKE NOISE

It is important to understand that brake noise (squeal, groan, howl, etc) is generated by the brake system as a whole and can be greatly influenced by the installation.

- **Rotor type** - Make sure an OE or high quality replacement rotor is used.
- **Rotor finish** - insure the surface is clean, smooth and flat. If turned, apply a non-directional finish using a bead brush or 120 grit sand paper.
- **Pad fitment** - When installed the pad should fit snug with no rattle or movement. If this is not the case, inspect and replace hardware and abutment clips as necessary.
- **Lubrication** - Noise is typically a result of vibration being transferred between components of the brake system. Proper lubrication of these contact points can greatly reduce this from occurring. High temperature synthetic lubricant containing moly should be applied at all contact points of the pad and the brake system, making sure not to get any lubricant on the friction surface.
- **Break-in** - proper break-in of anew set of brake pads will deposit a transfer layer onto the rotor surface. This layer aides in creating a smooth contact between the pad and rotor eliminating potential vibrations.

Below is a checklist of some key items to keep in mind when installing your VelveTouch brake pads.

## WHY USE A BOOSTED MASTER CYLINDER (BOOSTER) INSTEAD OF A STANDARD MASTER CYLINDER?

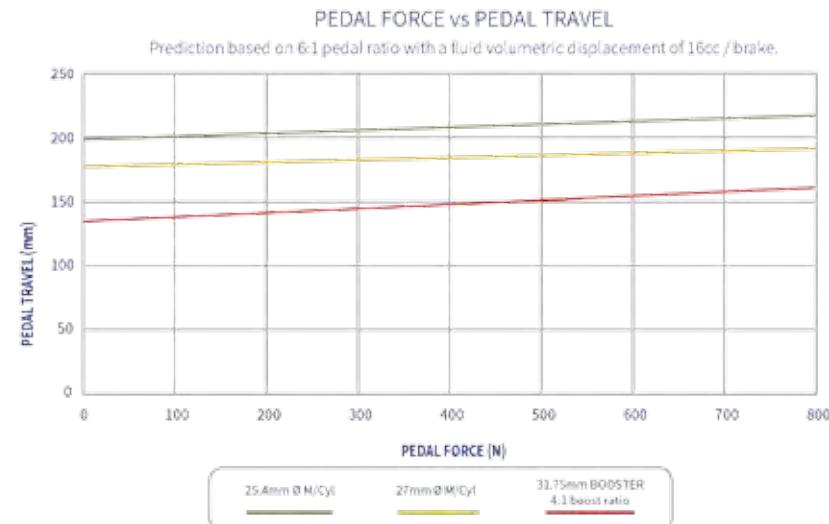

Boosters Provide Higher Output Pressure to the Brake System, Resulting in...

- A significant reduction in pedal effort and pedal travel to achieve the required operating pressure at the brake
- A progressive and controllable braking response offering improved cabin ergonomics and enhanced operator comfort
- A more efficient method of applying the brakes on Off-Highway vehicles

### BOOSTERS require much less input force to achieve Normal Operating Pressure

To achieve the same Pedal Force a Carlisle BOOSTER requires much less pedal travel than a standard master cylinder

### EXPORT PRODUCT AND TECHNOLOGY TRENDS

MIDI TWIN BOOSTER

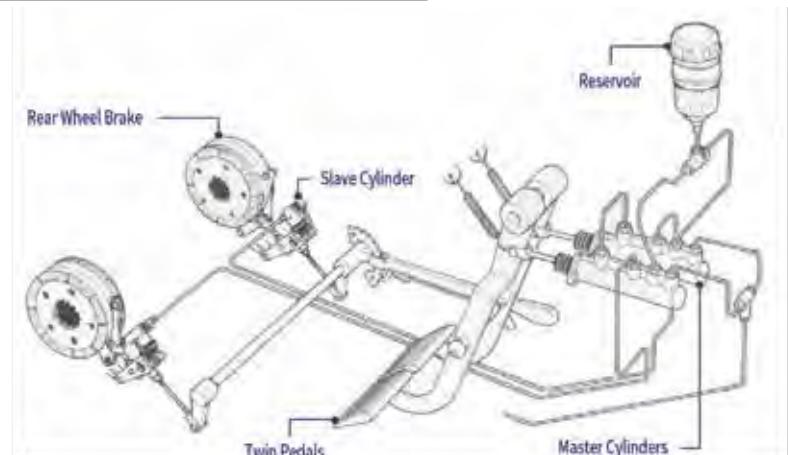

COMPACT TWIN BOOSTER

- Drivers demand 'Luxury Car' performance from brake & clutch systems for Off-Highway vehicles

- Increasing horsepower, speed and weight requirements in Europe & North America have led to:
  - Truck legislation imposed on vehicles operating at > 50kph
  - Increasing brake running clearance reduces brake drag, resulting in improved fuel efficiency and lower operating costs
  - Braking required on all four wheels
  - Balanced braking across axles

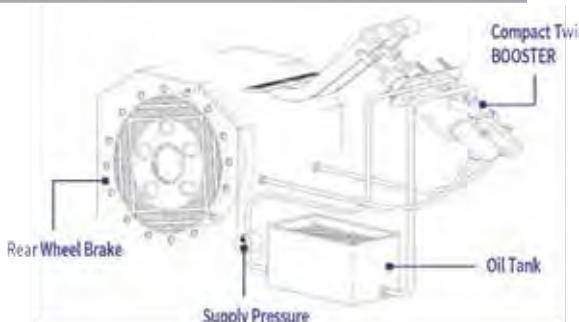

## BRAKE SYSTEM DIAGRAMS

### TYPICAL TRACTOR BRAKING SYSTEM

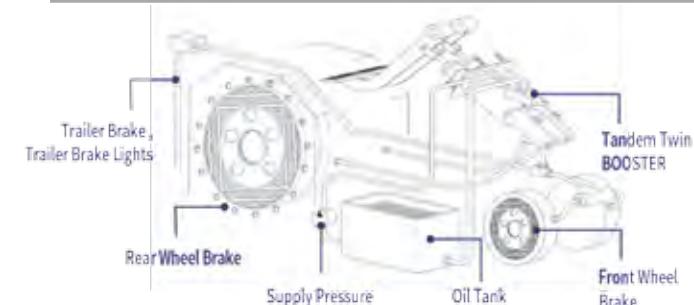

Most tractor brake systems use MINERAL oil, but some use VEGETABLE (Glycol) synthetic fluid as used by passenger cars — it is very important that the seals of either are not mixed.

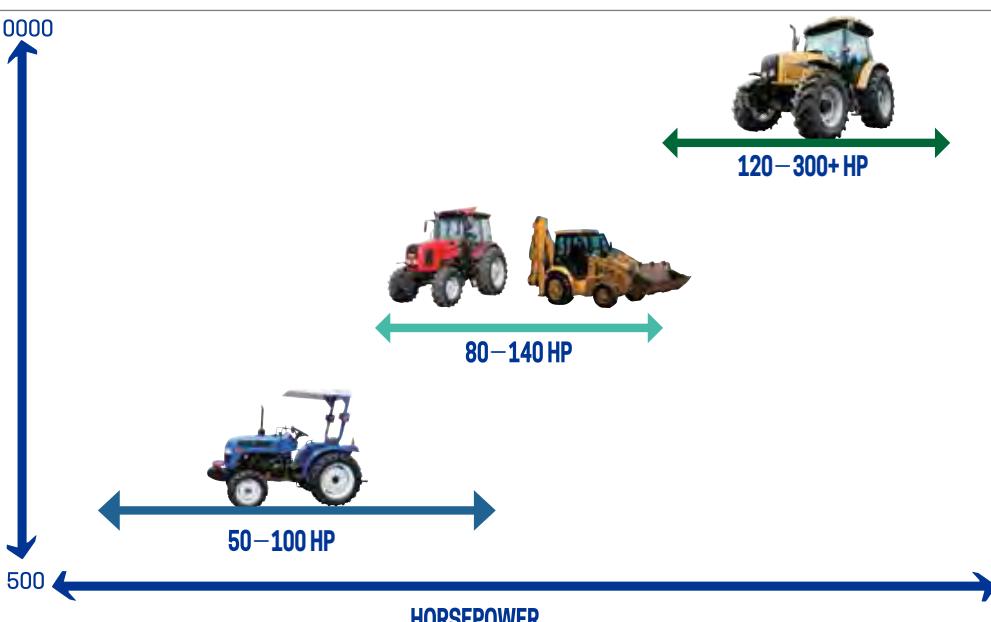

### CARLISLE TWIN BOOSTER APPLICATION

### CARLISLE TANDEM TWIN BOOSTER APPLICATION

### APPLICATION RANGES

## BENEFITS OF A CARLISLE BOOSTER

Comfort & Safety 

- A wide range of boost ratios and master cylinder diameters can be used to tailor the performance to meet the customer's exact requirements
- Provide a progressive and controllable braking response by optimising the "pedal feel" and improving driver comfort and cabin ergonomics
- Use of **PTFE seal technology** provides high wear resistance and extended durability life. One million cycles achieved with no deterioration of product
- Self-bleed feature allows any air ingress in the master cylinders to be vented to the tank chamber during normal operation
- No additional reservoir required: The master cylinder and BOOSTER use a common oil supply thus preventing the cross contamination of fluids or potential ingress of debris
- Significant reduction in warranty issues
- Closed center BOOSTER design minimizes oil usage
- Uses the existing vehicle power hydraulic system to provide servo assist to the master cylinder
- Patented design for twin or single pedal brake systems
- Significant cost advantage compared to Power Valve products
- Ease of installation — only four hydraulic connections required
- Various mounting plate and push rod options available

COMPACT TWIN BOOSTER

COMPACT SINGLE BOOSTER

MIDI TWIN BOOSTER

TANDEM TWIN BOOSTER

TANDEM SINGLE BOOSTER

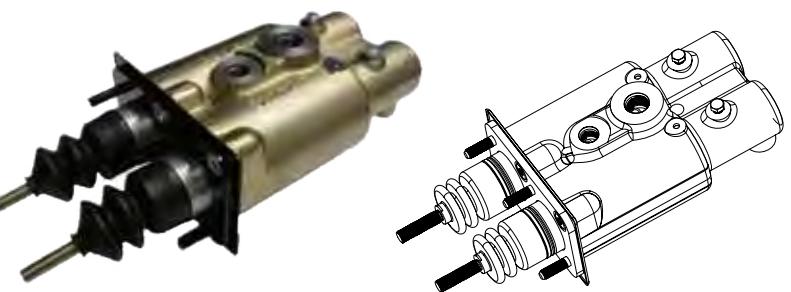

MASTER CYLINDER

## COMPACT TWIN BOOSTER

**Patented closed circuit design with integrated master cylinder BOOSTER and reservoir in a single component**

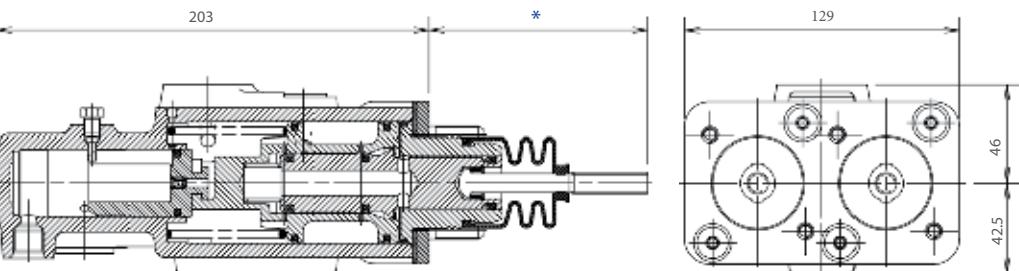

- Patented design for mineral oil twin pedal braking systems providing a boosted, progressive pedal feel
- Generic design enables performance to be easily matched to most agricultural and industrial vehicle applications
- Self-bleed design keeps BOOSTER purged of any ingressed air
- **PTFE seal technology** ensures extended service life
- No reservoir required — uses supply oil for braking systems
- Range of metric or imperial ports — to international standards — available
- Large variety of pushrod lengths and thread sizes available \*
- Clevis options available to suit customer requirements

## COMPACT TWIN BOOSTER

## Specifications

Body Length	Less than 205 mm	Range of Diameters	25.4 mm to 57 mm
Oil	Mineral Oil	Supply Pressure	15 bar to 40 bar
Tested to	1,000,000 Cycles	Minimum Flow Rate	10 L/min
BOOSTER Ratio	2.65, 4, 5 and 6.2:1	Operation Temperature	-30°C to 100°C

# COMPACT SINGLE BOOSTER

**Patented closed circuit design with integrated master cylinder, BOOSTER and reservoir in a single component**

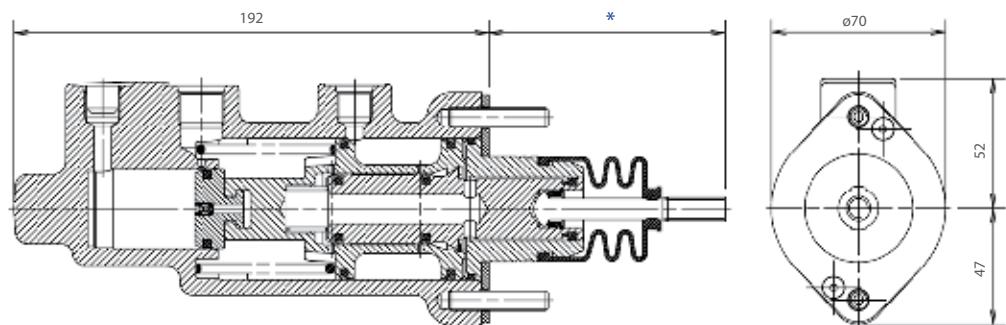

- Patented design for mineral oil single pedal braking systems, providing a boosted, progressive pedal feel
- Ideal for clutch applications
- Generic design enables performance to be easily matched to most agricultural and industrial vehicle applications
- Self-bleed design keeps BOOSTER purged of any ingressed air
- **PTFE seal technology** ensures extended service life
- No reservoir required — uses supply oil for braking or clutch systems
- Range of metric or imperial ports — to international standards — available
- Large variety of pushrod lengths and thread sizes available \*
- Clevis options available to suit customer requirements

## COMPACT SINGLE BOOSTER

### Specifications

Body Length	Less than 200 mm	Range of Diameters	25.4 mm to 41 mm
Oil	Mineral Oil	Supply Pressure	15 bar to 40 bar
Tested to	1,000,000 Cycles	Minimum Flow Rate	10 L/min
BOOSTER Ratio	2.65, 4.5 and 6.2:1	Operation Temperature	-30°C to 100°C

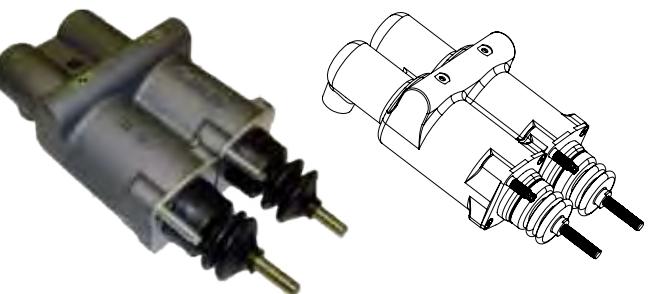

# MIDI TWIN BOOSTER

**Simplified design reduced weight and smaller size give cost advantages over larger BOOSTERS in the Carlisle BOOSTER family**

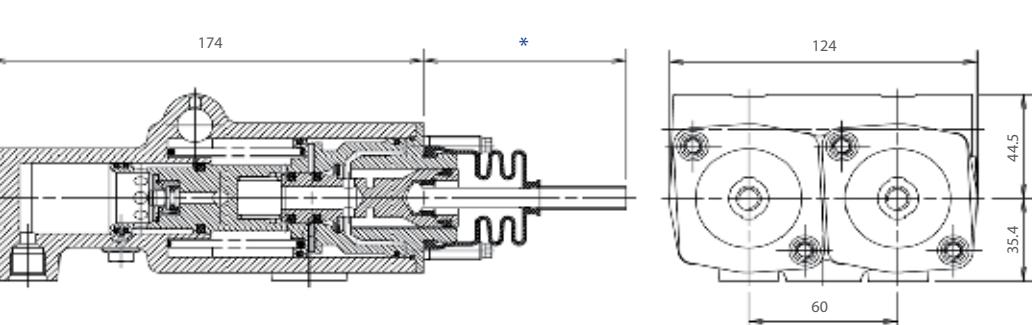

- Patented design for mineral oil twin pedal braking systems providing a boosted, progressive pedal feel
- Generic design enables performance to be easily matched to most agricultural and industrial applications
- Self-bleed design keeps BOOSTER purged of any ingressed air
- **PTFE seal technology** ensures extended service life
- No reservoir required — uses supply oil for braking systems
- Range of metric or imperial ports — to international standards — available
- Large variety of pushrod lengths and thread sizes available \*
- Clevis options available to suit customer requirements

## MIDI TWIN BOOSTER

### Specifications

Body Length	Less than 175 mm	Supply Pressure	15 bar to 40 bar
Oil	Mineral Oil	Minimum Flow Rate	10 L/min
Tested to	1,000,000 Cycles	Operation Temperature	-30°C to 100°C
BOOSTER Ratio	3.4 and 5.1	Vehicle Horsepower*	80 HP to 130 HP
Range of Diameters	25.4 mm to 30 mm		

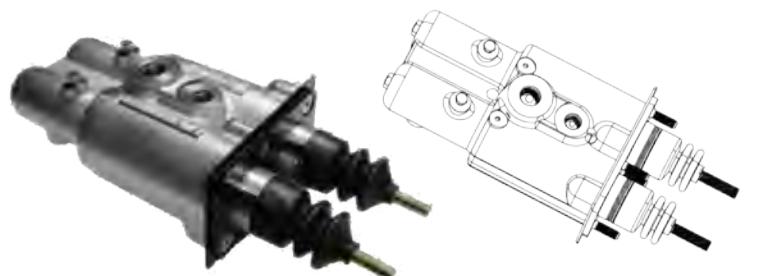

## BRAKING CAPABILITIES:

- Pressure Balanced
  - Independent
  - Dual-circuit
  - Designed for twin pedal vehicles with four independent brakes
  - Trailer brake option

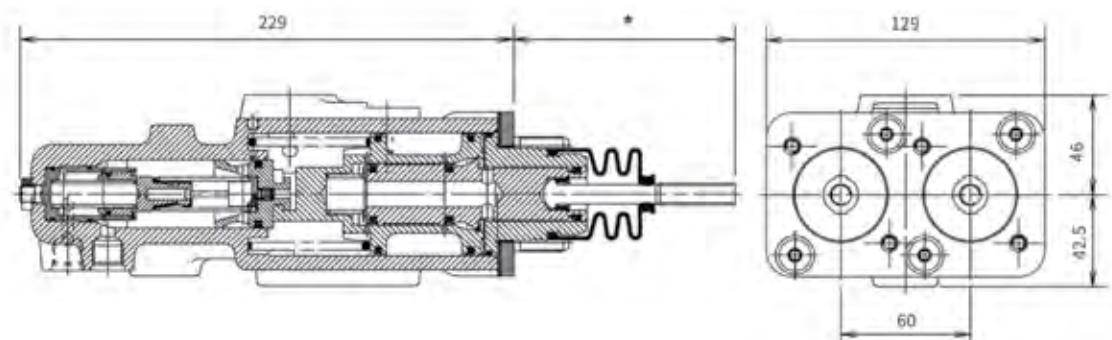

- Patented design for mineral oil twin pedal braking systems providing a boosted, progressive pedal feel
  - Generic design enables performance to be easily matched to most agricultural and industrial applications
  - Self-bleed design keeps BOOSTER purged of any ingressed air
  - **PTFE seal technology** ensures extended service life
  - No reservoir required — uses supply oil for braking systems
  - Range of metric or imperial ports — to international standards — available
  - Large variety of pushrod lengths and thread sizes available \*
  - Clevis options available to suit customer requirements

# TANDEM TWIN BOOSTER

## Specifications

<b>Body Length</b>	Less than 230 mm	<b>Range of Diameters</b>	25.4 mm to 35 mm
Oil	Mineral Oil	Supply Pressure	15 bar to 40 bar
<b>Tested to</b>	<b>1,000,000 Cycles</b>	<b>Minimum Flow Rate</b>	<b>10 L/min</b>
BOOSTER Ratio	265. 4. 5 and 6:1	Operation Temperature	-30°C to 100°C

## BRAKING CAPABILITIES:

- Independent      ▪ Dual-circuit  
Designed for single pedal vehicles with split circuit braking**

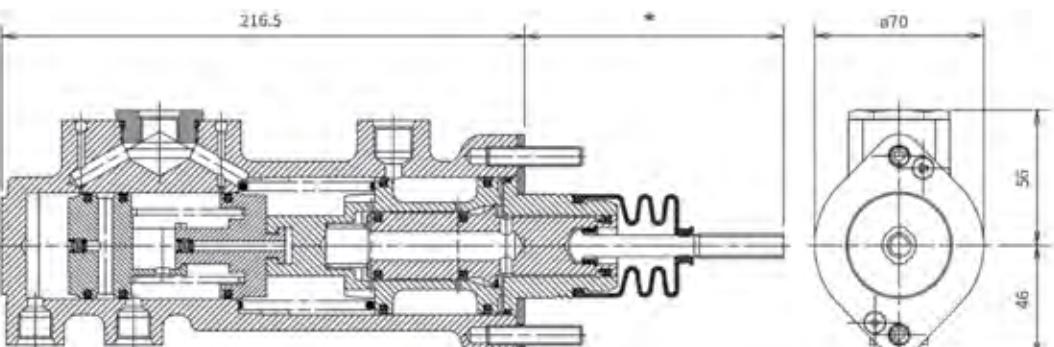

- Patented design for mineral oil single pedal braking systems providing a boosted, progressive pedal feel
  - Generic design enables performance to be easily matched to most agricultural and industrial applications
  - Self-bleed design keeps BOOSTER purged of any ingressed air
  - **PTFE seal technology** ensures extended service life
  - No reservoir required — uses supply oil for braking systems
  - Range of metric or imperial ports — to international standards — available
  - Large variety of pushrod lengths and thread sizes available \*
  - Clevis options available to suit customer requirements

## TANDEM SINGLE BOOSTER

## Specifications

<b>Body Length</b>	Less than 220 mm	<b>Range of Diameters</b>	25.4 mm to 44 mm
Oil	Mineral Oil	Supply Pressure	15 bar to 40 bar
<b>Tested to</b>	<b>1,000,000 Cycles</b>	<b>Minimum Flow Rate</b>	<b>10 L/min</b>
BOOSTER Ratio	3,4 and 5:1	Operation Temperature	-30°C to 100°C

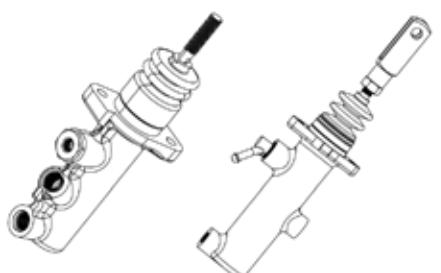

# MASTER CYLINDERS

## FEATURES:

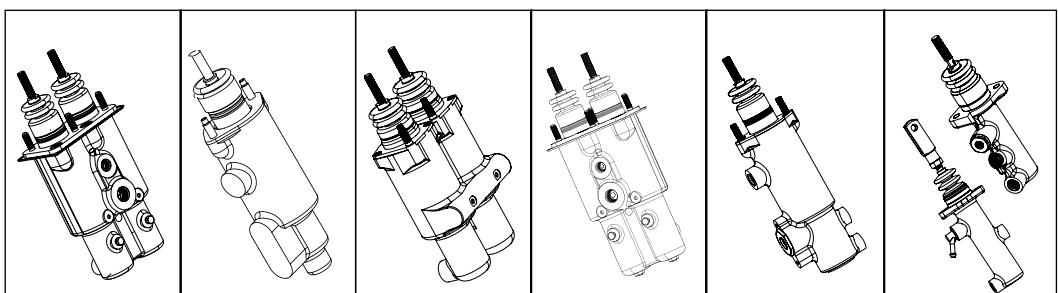

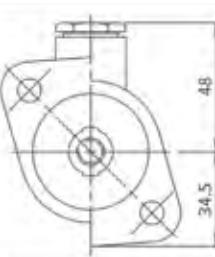

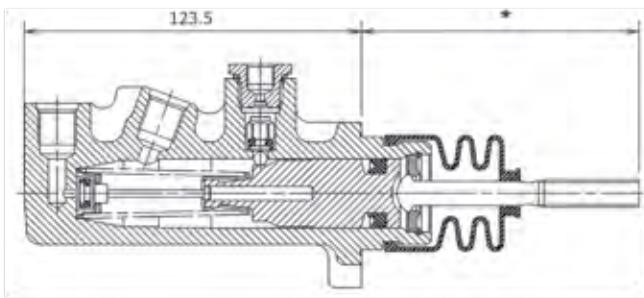

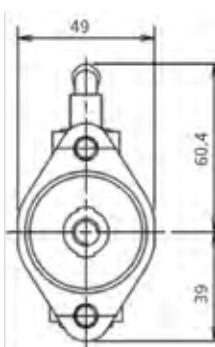

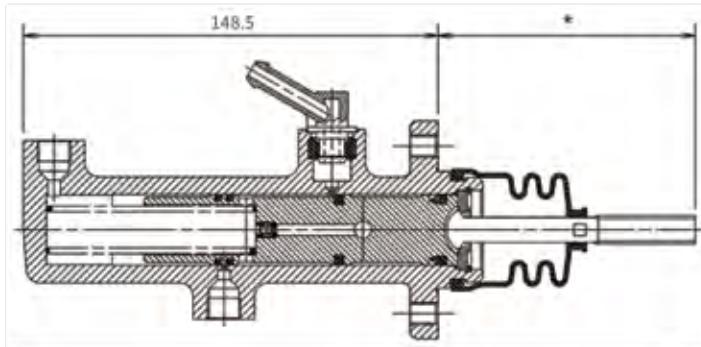

- Designs for single and twin pedal applications
- Twin pedal cylinders feature proven compensation design for dual circuit pressure balance
- New self-bleed design features PTFE sealing for improved life and continuous air expulsion
- Designed to meet a range of operating pressures and temperatures
- Large variety of pushrod lengths and thread sizes \*
- Range of metric or imperial ports — to international standards — available
- Clevis options available to suit customer requirements

# 1100 SERIES VALVE

## DESCRIPTION

The Carlisle single and tandem circuit modulating hydraulic control valves are made of ductile cast iron bodies. The valves are capable of providing modulating output pressures to a maximum 3,500 psi (24,133 kPa).

## FEATURES

- Flow capabilities exceed competitive designs
- Spool design provides smooth modulation at all output pressures
- Externally adjustable to provide precise pressure settings
- Rugged construction for most severe job applications
- Thoroughly tested to ensure superior performance and durability

## APPLICATION

- Hydraulically actuated, single and tandem circuit braking and industrial systems where high quality, precise modulation is required

### Options

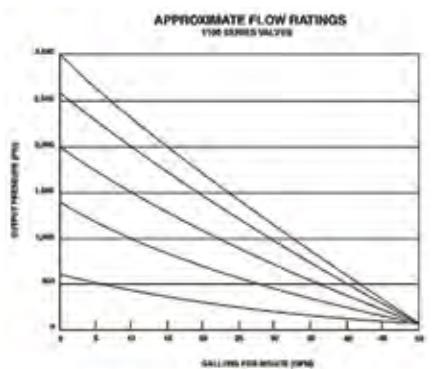

- Vertical and horizontal treadle actuator with adjustable pedal angle and pedal travel
- Horizontally mounted suspended pedal actuator
- 90° porting orientation intervals for vertically mounted valves
- 180° porting orientation intervals for horizontally mounted treadle valves
- Hydraulic pilot apply**
- Pressure-adjustable stoplight switch for mobile applications
- Heavy or medium pedal force selection**
- SAE porting
- Staged pressure rise for precise control

### Specifications

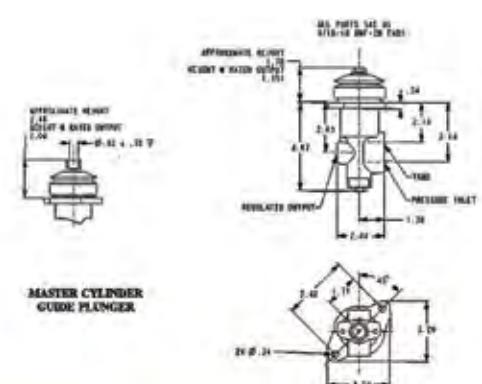

- Body Material: Ductile iron
- Seal Material: Nitroxile® compound
- Maximum Input Pressure: 3,500 psi (24,133 kPa)
- (24,133 kPa) Maximum Output Pressure: 3,500 psi (24,133 kPa)

# 2100 SERIES VALVE

## DESCRIPTION

The Carlisle single circuit (2101) and parallel (2102) circuit, modulating hydraulic control valves are capable of providing modulating output pressures in a range of 600 psi - 3,500 psi (4,137 kPa to 24,133 kPa).

## FEATURES

- Spool sleeve design allows for easy serviceability and reduced maintenance costs
- Spool design provides smooth modulation at all output pressures
- Valve is externally adjustable to provide precise pressure settings
- Large supply and return ports provide high flow capabilities
- Standard pilot apply (optional on the 2101 series)
- Rugged construction and thorough testing ensure superior performance
- Pedal angle fully adjustable
- Dampened spools for stable noise control

## APPLICATION

- Hydraulically actuated, single and tandem circuit braking and industrial systems where high quality, precise modulation is required

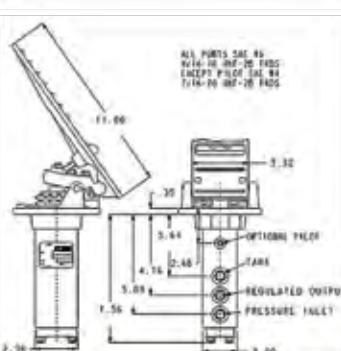

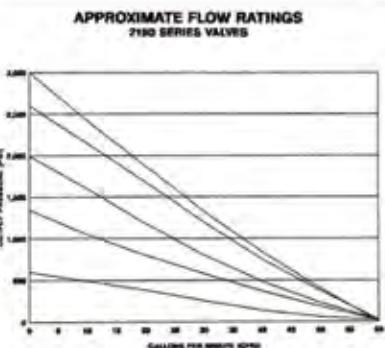

## Options

- Treadle actuator with adjustable pedal angle
- Circuit staging to provide non-linear output pressure
- Unequal output pressure on "B1" and "B2" (2102 series)
- Adjustable stoplight switch
- Available with or without pedal/actuator, or lever actuator with friction/detent option (2101 series)
- Firewall mounted, suspended pedal
- Dual pilots for separate circuit control
- Externally adjustable differential pressure warning switch
- SAE or metric ports

## Specifications

- Body Material: High strength aluminum
- Seal Material: Nitroxile® compound
- Maximum Input Pressure: 3,500 psi (24,133 kPa)
- Maximum Output Pressure: 600 psi - 3,500 psi (4,137 kPa - 24,133 kPa)

# DUAL CIRCUIT ADJUSTER

Contact Carlisle for information about other available displacements.

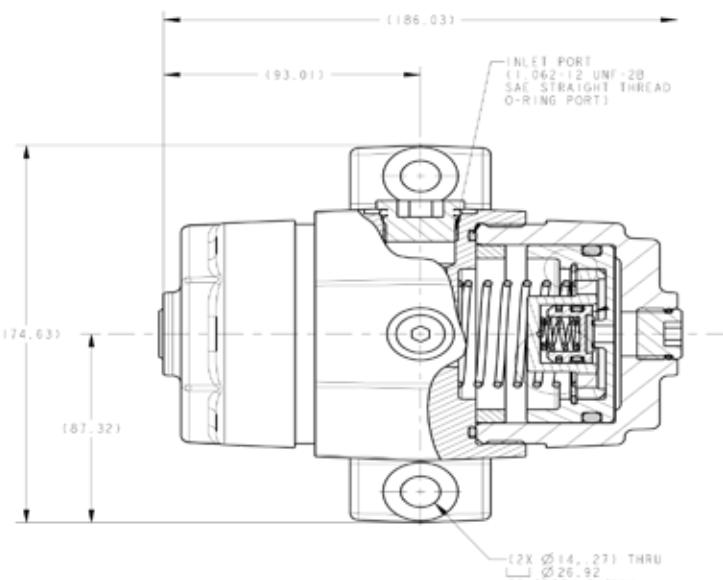

## DESCRIPTION

The automatic adjusters are used for in-line adjustment of high displacement hydraulic brakes. The adjuster functions to provide running clearance at each brake application. In drum brake applications the adjuster also compensates for clearance reduction due to thermal contraction of the brake.

## FEATURES

- Rugged cast iron construction for lasting performance and durability
- Adjuster assembly can be easily retrofit to an existing hydraulic brake system
- Available in both single or dual circuit configurations
- Capacities range from 3.5 to 15.0 cu in
- Piston replacement kits are available

Dual Circuit			
Capacity		A	
IN <sup>3</sup>	CM <sup>3</sup>	IN	CM
3.5-3.5	57-57	6.8	173
6.0-6.0	98-98	7.3	185
10.0-10.0	164-164	8.2	208
12.0-12.0	197-197	8.3	211
15.7-15.7	257-257	9.7	246

## APPLICATION

- Mining Applications intended for wet or dry hydraulic brake systems

## DUAL CIRCUIT ADJUSTER

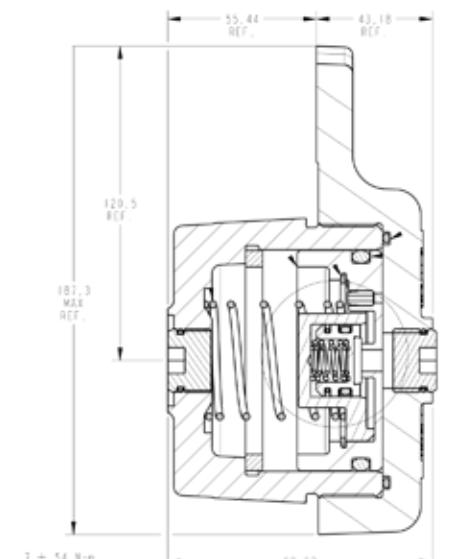

## DESCRIPTION

The automatic adjusters are used for in-line adjustment of high displacement hydraulic brakes. The adjuster functions to provide running clearance at each brake application. In drum brake applications, the adjuster also compensates for clearance reduction due to thermal contraction of the brake.

## FEATURES

- Rugged cast iron construction for lasting performance and durability
- Adjuster assembly can be easily retrofit to an existing hydraulic brake system
- Available in both single or dual circuit configurations
- Capacities range from 3.5 to 15.0 cu in
- Piston replacement kits are available

Single Circuit			
Capacity		A
